The Right to Work folks say they'll ask to intervene representing SC workers, according to this story. (And they think it would be terrible if there was a settlement in the case.)

Mix said his worry is that the company will agree to a settlement that weakens right-to-work laws. A top concern is that Boeing will allow the machinists union to try to organize its local plant by signing cards -- a method known as check-card voting -- instead of by secret ballot, he said.
